

Car Type (Car_Type_ID PK, Desc)

Car (VIN PK, Make, Model, Car_Type_ID FK)

Customer Car Type Preference (Customer_ID PK + FK, Car_Type_ID PK + FK, Rank)

Feature (Feature_ID PK , Feature, VIN PK + FK)

Customer (Customer_ID PK, Customer_Name)

Address (Address_Type PK, Street, Number, City, State, Zip, Customer_ID PK + FK)

Rental (Rental_ID PK, Start_Date, Return_Date, Total_Cost, VIN FK, Customer_ID FK)

Payment (Payment_ID PK, Pay_Date, Pay_Time, Pay_Amount, Rental_ID FK)

I had to fix to the associative entity of car type preference on my relational schema because I failed to create a table for it. This is important for me to learn and remember to do so that the tables are all made in the correct way and include all the correct attributes and relationships. All of my primary keys were correct and so were my foreign keys
